PROFESSIONAL SUMMARY

Kevin DiMedio, Associate Director at Sync Forensics, provides digital forensics, incident response, and investigative consulting services to law firms and entities of all kinds. A Certified Forensic Computer Examiner (CFCE) through IACIS and a GIAC iOS and macOS Examiner (GIME) through SANS, Mr. DiMedio specializes in Apple-device forensics. He has collected, analyzed, searched, and remediated data from hundreds of Macs, iPhones, iPads, and iCloud accounts, leading small to large-scale investigation and remediation efforts. He combines manual artifact parsing with industry-standard tools such as Magnet AXIOM/ VeraKey, Cellebrite Digital Collector/Inspector, and Mac-APT. In interpreting those artifacts, Kevin works to answer the case's most pressing questions and helps his clients achieve clarity on what the evidence reveals, and, in many instances, what it doesn't. Kevin's casework experience spans reviewing employee departure events, investigating allegations of theft/misappropriation of trade secrets, executing ESI remediation protocols, assessing cyber security threats, and more.

Mr. DiMedio's technical experience touches dead-box digital forensics, cloud account log analysis, dark web monitoring, eDiscovery data mining, and business email compromise. He has reviewed Microsoft 365 and Google Workspace logs to identify indicators of compromise and build incident timelines, giving stakeholders the information they need to understand what data is at risk and meet any potential breach notification obligations. Mr. DiMedio began his career in digital forensic consulting in 2019 and has grown from an entry-level role to managing and leading projects.
